

# ACO Surface Water Management

IKEA Sofia, July 2011

## IKEA Sofia

### Surface Water Management and building drainage solution

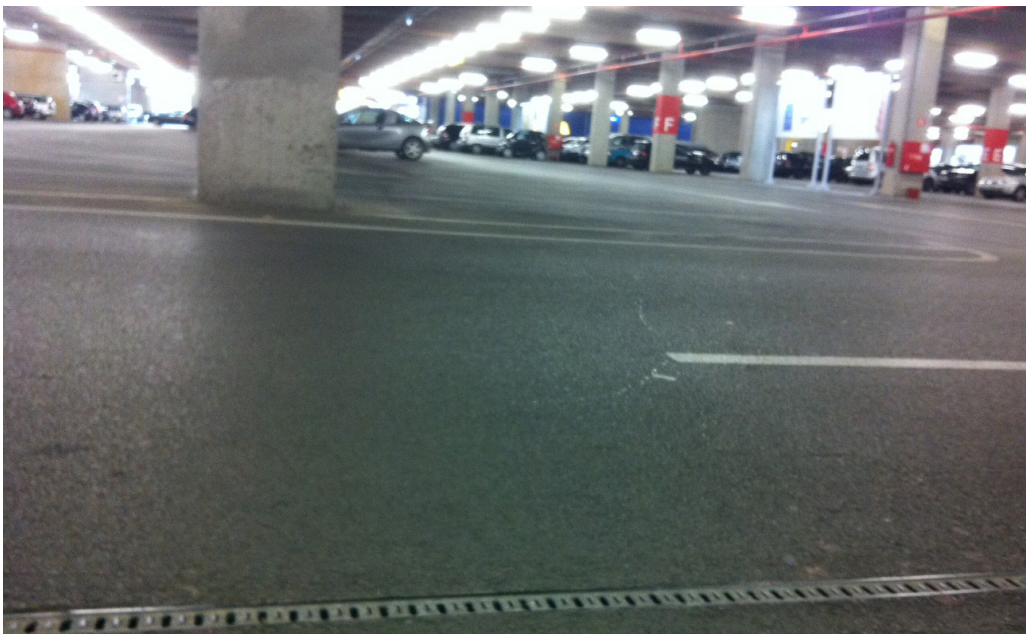

The first outlet of the Swedish furniture and home decoration company IKEA opens in Bulgaria in September 2011 in Sofia. The project includes more than 29 000 sq.m. building as well as open and underground parking with places for 1200 vehicles. Line drainage system ACO DRAIN®

MultiDrain is installed in the outside area. The optimal and safe drainage of the underground parking is guaranteed with the innovative system ACO Qmax.

The area surrounding the building is also equipped with manhole covers ACO Multitop and street gullies ACO Combipoint.

ACO MultiDrain - line drainage

The catering area inside the building has stainless steel channels and gullies to provide optimal hygiene and safety. Waste water coming from the building is treated with ACO Clara treatment plant.

ACO. The future of drainage.
