

# ACO Surface Water Management

Sofia city

## Sofia city

Surface Water Management for roads and town squares

ACO Monoblock is the preferred line drainage system for Sofia municipality projects. It has been chosen by the designers and municipality representatives because of its unique features. First, the system provides optimal stability, durability and vandalism-safety. Second, the natural color of the channels

corresponds to the stone pavements which are used in many of the central areas of the city. ACO Monoblock PD is installed in the main square of the city – Independence, where the most important government and public building are located.

ACO Monoblock at Independence Square

ACO Monoblock is also installed on many newly constructed underground stations and connecting road infrastructure.
